

International Conference on "Emerging Trends in Applied and Computational Physics 2019"

International Conference "Emerging Trends in Applied and Computational Physics 2019" (ETACP-2019) is a conference that goals to bring together specialists in different fields of physics, nanoscience and applied mathematics for discussions on actual problems and major advances in physics and technologies. The conference is contributed to scientific exchange among researchers engaged in the fields of physics, development, and design of nanoelectronic and telecommunication devices, applied mathematics, signal processing, material science and nanotechnology.

International Conference "Emerging Trends in Applied and Computational Physics 2019" (ETACP-2019) is a conference that goals to bring together specialists in different fields of physics, nanoscience and applied mathematics for discussions on actual problems and major advances in physics and technologies. The conference is contributed to scientific exchange among researchers engaged in the fields of physics, development, and design of nanoelectronic and telecommunication devices, applied mathematics, signal processing, material science and nanotechnology.

The official language of the conference is English. The accepted and presented papers will be sent for publishing to Journal of Physics: Conference Series (IOP Publishing).

Topics and Sections

Advanced Materials and Nanostructures

Nanotechnology and Processing in Mechanics and Physics

Applied Mathematics and Computational Physics

Applied Thermal Physics and Hydro-aero-dynamics

Nanoelectronics, Signal Processing and Telecommunications

Important dates

Full Paper Submission: February 25, 2019

Notification of acceptance: March 10, 2019
